

ASX ANNOUNCEMENT

25 November 2020

BLACKDOME-ELIZABETH GOLD PROJECT UPDATE

Tempus Resources Ltd (“**Tempus**” or “the **Company**”) is pleased to provide an update on exploration activities at its Blackdome-Elizabeth Gold Project, located in British Columbia, Canada.

Diamond drilling at the high grade **Elizabeth** sector of the Project is progressing, with 195 metres completed (3 holes), as at today. A second drill rig will commence operations on the program later this week.

The initial focus for the planned 6,000 metre drilling program is the southern portion of the Southwest Vein (Figure 1), which hosts the majority of the historical NI43-101 Mineral Resource at **Elizabeth**, which comprises 522,843 tonnes grading 12.26 g/t gold, for 206,139 ounces of contained gold (refer to ASX Announcement of 19 August, 2019 for further details).

Reporting of final assays from the recently completed drilling at the **Blackdome** sector of the Project has been delayed due to the laboratory requiring further QA/QC analysis on the samples prior to release of the results to Tempus. These results will be reported to the market as soon as they come to hand.

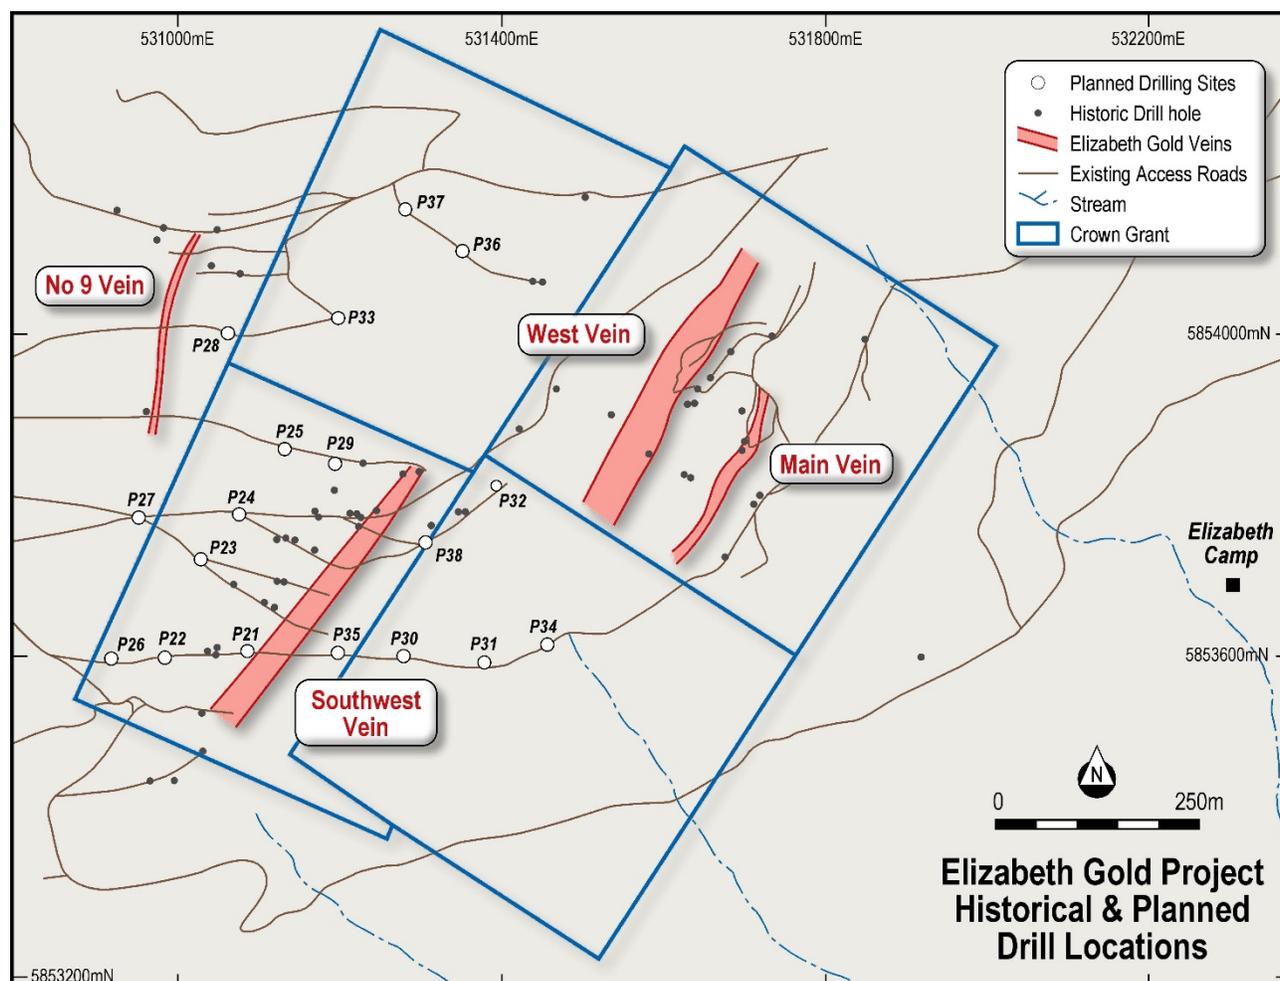

This announcement has been authorised by the Board of Directors of Tempus Resources Limited.

Competent Persons Statement

Information in this report relating to Exploration Results is based on information reviewed by Mr. Kevin Piepgrass, who is a Member of the Association of Professional Engineers and Geoscientists of the province of BC (APEGBC), which is a recognised Professional Organisation (RPO), and an employee of Tempus Resources. Mr. Piepgrass has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined by the 2012 Edition of the Australasian Code for reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Piepgrass consents to the inclusion of the data in the form and context in which it appears

About the Blackdome-Elizabeth Gold Project

Tempus is focussed on rapidly verifying and expanding the historical high grade Mineral Resource at the Blackdome-Elizabeth Project in British Columbia by drilling extensions to existing mineralisation and other high priority targets within the 350 km² licence area, which remains relatively unexplored. Tempus also intends to leverage the existing permitted mill, tailings dam and other infrastructure at Blackdome with the aim of re-commencing production as the Project proceeds.
